

HAW-W06

TM-HAW-W06e-08/11

Technical Data Sheet

Description

HAW-W06 is a self vulcanizing soft rubber based on bromobutyle (BIIR), filled with carbon black, which can also be applied and vulcanized on site. The layer thickness of the rubber sheet may range between 3 and 6 mm.

Main Application

The lining of flue gas scrubbers for power plants and waste incineration, phosphoric acid plants, storage tanks, reaction vessels and pipes.

Range of Application

HAW-W06 is used as a protective lining for structural components made of steel that are subjected to chemical exposure and is distinguished by

- an outstanding chemical resistance
- a high diffusion resistance

resistant:

- + alkaline and acids
- + oxidizing agents at lower and medium concentrations
- + polar solvents

not resistant:

- + aromatics and greases

Physical Data

Material Properties	Unit	Value	Technical Standard
Hardness	Shore A	65 ± 5	DIN 53505
Specific weight	g/cm ³	1,19 ± 0,02	DIN EN ISO 1183
Tensile strength ^{*)}	MPa	≥ 4	DIN 53504
Elongation at break ^{*)}	%	> 300	DIN 53504
Rubber-metal-adhesion peeling test	N/mm	≥ 3	DIN EN 14879-4
Max. service temperature	°C	100	-
Testing Voltage	kV/mm	3	-

*) The Values were determined at 4 mm thick rubber samples.

The technical data contained herein represents the current state of our product knowledge and is intended to furnish general information regarding our products and their application spectrum. In view of the diversity and multitude of application possibilities, this data should be regarded solely as general information, which does not guarantee any specific properties and/or suitability of these products for each concretely case of application. Consequently, when ordering a product, please contact us for detailed information relative to the properties required for a specific application. Our technical service will, upon request, furnish a profile of characteristics for the concretely application without delay.
